

- Topic: **Web and Mobile Tools**
- **55** members completed Mini Survey #2
- Raffle winners: **Kim Lindsey** and **Tricia Spayer**

- **Question 1: If you were designing your own online resource library, what categories would be most useful for you?**
- We had several excellent and thoughtful suggestions. Some of the most-suggested categories include (but are not limited to):
  - Examples of good training materials & templates
  - Tool comparisons
  - Best Practices and Tips
  - Educational Opportunities (e.g. certificate courses, conferences, degree programs)
  - Learning Theories
  - Links to free and low-cost tools
  - Templates
  - Mobile & tablet requirements
  - Materials for freelancers and independent consultants
  - Getting Started in IDL

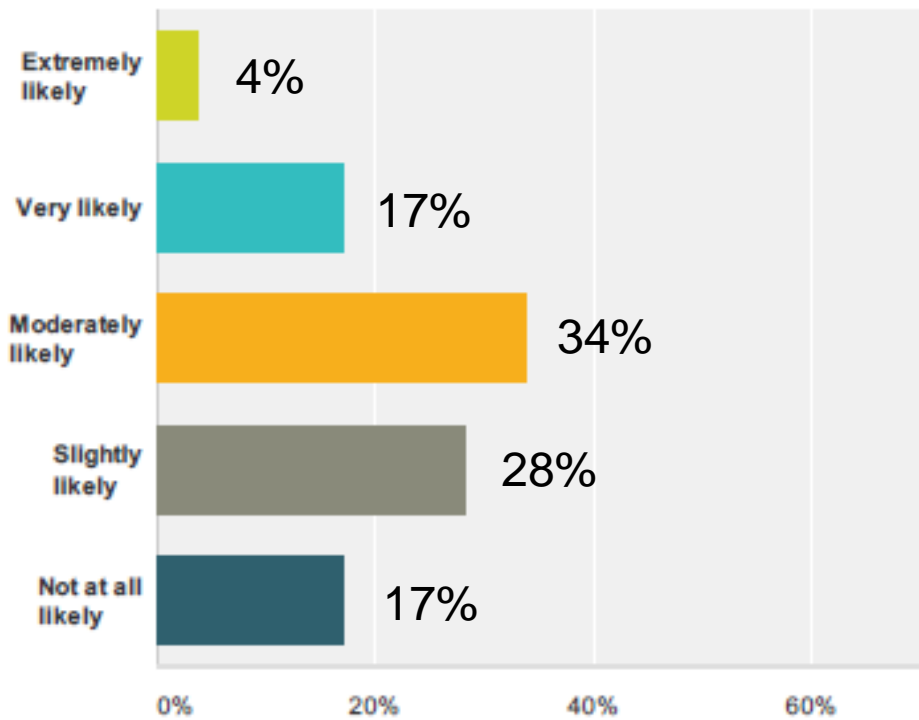

- **Question 2: How likely would you use this resources library?**

- **Question 3: How likely would you be willing to contribute content or links to the resource library?**

**Almost half of the respondents indicated they were slightly or not at all likely to contribute content.**

**As we establish this site, we should stress the collaborative nature of these resource links and make the submission process simple, so more people can contribute.**

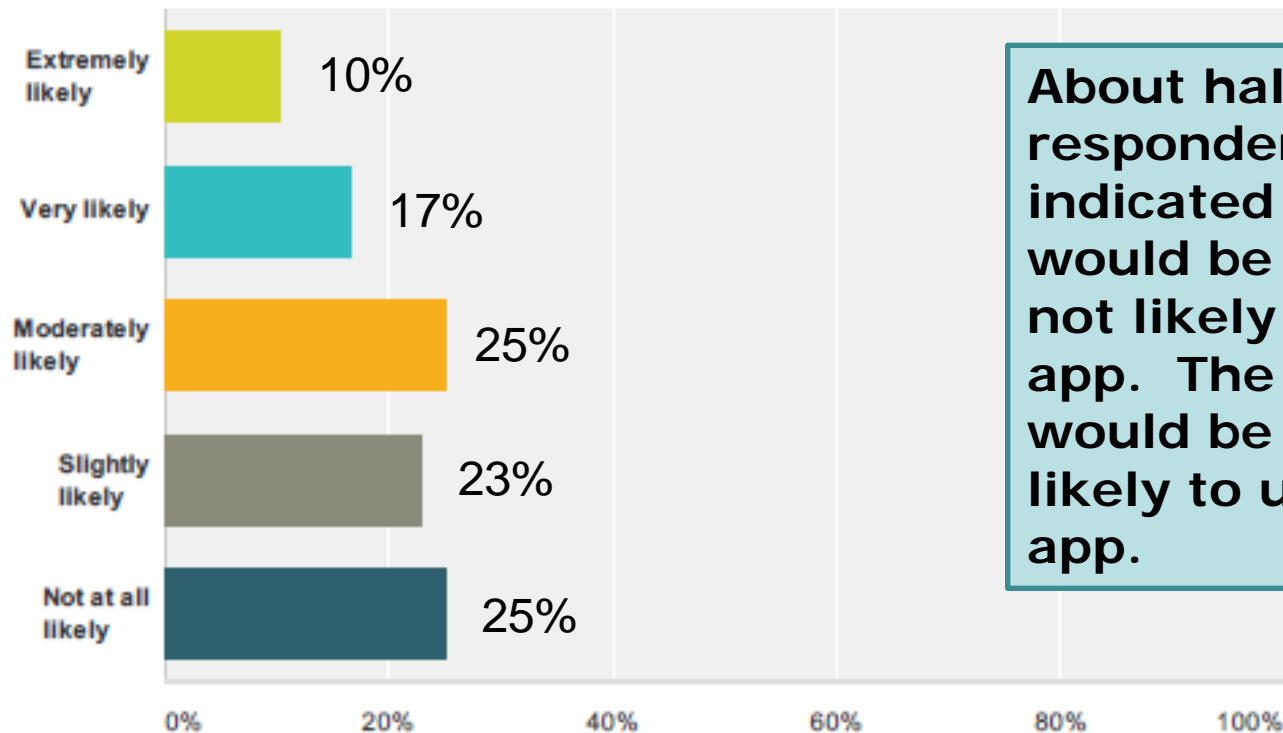

- **Question 4: What SIG-specific information would you expect to access from a mobile device?**
- Some of the most-suggested items include (but are not limited to):
  - Upcoming Events & Webinar info (including registration links)
  - Same items/headings as website
  - Summit info
  - Twitter/RSS feeds
  - SIG news & announcements
  - News & feeds from industry experts
  - Newsletter
  - Contact info for SIG management
  - Links to informational resources
  - Job postings

**Most respondents indicated same info as the website, which suggests that mobile version of the website may be more valuable than a standalone app *per se*.**

- **Question 5: How likely would you use this web-based app?**

**About half of the respondents indicated they would be slightly or not likely to use this app. The other half would be a bit more likely to use such a app.**
